

# Introducing the new member of the Mi-Vitamin™ family!

## Mi- GlucaChol-22™ Instant Flavoured Drinks

### For a healthy heart

- Reduces blood cholesterol levels
- Very high in fibre
- Effective within weeks
- Contains Tolerase® L (lactase)

### What is Lactose Intolerance?

- Lactose is a milk sugar, naturally present in dairy products
- It is digested by the enzyme lactase and broken down into glucose and galactose, which are absorbed into the bloodstream
- Lactose-intolerant people lack this enzyme and as a result are unable to digest lactose fully

### What are the symptoms of Lactose Intolerance?

- If undigested, lactose reaches the large intestine where it is degraded by its microflora
- The resulting by-products may cause symptoms of lactose intolerance including diarrhoea, abdominal cramps, flatulence and nausea
- When lactose intolerant people stop consuming dairy products, their intake of calcium tends to be lower, which can put their bone health at risk

### Which foods are high in lactose?

Product	Lactose (g)
<b>Milk</b> (1 cup = 240 ml)	
Whole	9 – 12
Skimmed	11 – 14
Evaporated	24 – 28
